The RNG uses a hardware random number generator (HW RNG) along with a well-known algorithm (PRNG) to generate random numbers. The numbers generated by HW RNG and PRNG have passed Marsaglia's "diehard" tests for statistical randomness.

iTech Labs has also evaluated shuffling for single deck without joker for card games.

The shuffling tests were conducted on large enough samples to give the calculations sufficient statistical power.

iTech Labs has found that the card sequences are unpredictable, non-repeatable and uniformly distributed.

The certified code for the RNG has been fingerprinted.
